Features we claim is working:

1. App opens when you press icon
2. App goes to google map (UCSC area)
3. When pressing pins, a short description pops up
4. When pressing the "go" button, a pop-up menu appears with defined titles
5. Defined titles are: Categories, random, about, all.
6. Category button takes us to categories with defined titles: hidden treasure, hiking, all, garden, chill spot and swim spot
7. Search bar allows user to search for already implemented pins
8. Random takes user to "random" places
9. About button takes user to about page ("The A-team")

Features we wanted to implement:

1. User can add pins individually
2. User can write reviews of places
3. Top places
4. Downrate causes deletion (spam filter!)

Rating!
